Week 7

October 2 2022

Week 7 Prog 2

Type in the code, run the code, get results

```
//
```

```
// main.cpp
```

```
// Week 7 Prog 2
```

```
//
```

```
// Created by Pippo Pesic on 10/2/22.
```

```
//
```

```
#include "stdafx.h"
```

```
#include <iostream>
```

```
using namespace std;
```

```
// Step 1A – Define a class to be used as a PART.
```

```
class myPartClass{
```

```
    private:
```

```
    double d;
```

```
    public:
```

```
    myPartClass () { d = 0; }           // default constructor
```

```
    myPartClass ( double inD ) { d = inD; } // parameterized constructor
```

Philip Pesic

Week 7

October 2 2022

Week 7 Prog 2

```
double getD() { return d; }

void setD( double inD ) { d = inD; }

};
```

// Step 1B – Define a WHOLE class – composed of part classes.

```
class myWholeClass{

private:

    int x;

    myPartClass Part1; // Placing a part as private – Simple declaration statement

    // The class is a new TYPE, so you can use it in a declaration statement

    // The declaration statements can be use in the PRIVATE section of another class..

public:

    void setPart1D ( double inD ) { Part1.setD(inD); }

    // need function to access private declaration part1

    double getPart1D () { return Part1.getD(); }

    // need function to access private declaration part1

    int getX() { return x; }

    void setX( int inX ) { x = inX; }
```

Week 7

October 2 2022

Week 7 Prog 2

```
myPartClass Part2; // Placing a part as public – Simple declaration statement

// The class is a new TYPE, so you can use it in a declaration statement

// The declaration statements can be use in the PUBLIC section of another class..

myWholeClass() {x = 0;} // default myWholeClass constructor

myWholeClass( int inX, double inD1, double inD2 ) // parm myWholeClass constructor
{ x = inX; Part1.setD(inD1); Part2.setD(inD2); }

};

int main() {

//=====

=====

//Step 2 – Declaration statement for WHOLE class.

myWholeClass Whole1; // Default constructor

// look at default values

cout << "Whole 1 - default constuctor - whole X = " << Whole1.getX() << endl;
```

Philip Pesic

Week 7

October 2 2022

Week 7 Prog 2

```
cout << "Whole 1 - default constructor - Part 1 d = " << Whole1.getPart1D() << endl;
```

```
cout << "Whole 1 - default constructor - Part 2 d = " << Whole1.Part2.getD() << endl;
```

```
//Step 3 – Use it with the dot notation
```

```
Whole1.setX(20);
```

```
cout << "Whole 1 - set whole X = " << Whole1.getX() << endl;
```

```
Whole1.setPart1D( 21);
```

```
// Defined in private section so you have to use the functions.
```

```
cout << "Whole 1 - set Part 1 d = " << Whole1.getPart1D() << endl;
```

```
Whole1.Part2.setD(22);
```

```
// Defined in public section so you can use part with dot notation.
```

```
cout << "Whole 1 - set Part 2 d = " << Whole1.Part2.getD() << endl << endl;
```

```
//=====
```

```
=====
```

```
//Step 2 – Declaration statement for WHOLE class.
```

Week 7

October 2 2022

Week 7 Prog 2

```
myWholeClass Whole2( 91, 92, 93); // Parmaterized constructor
```

```
// look at default values
```

```
cout << "Whole 2 - Parm constuctor - whole X = " << Whole2.getX() << endl;
```

```
cout << "Whole 2 - Parm constuctor - Part 1 d = " << Whole2.getPart1D() << endl;
```

```
cout << "Whole 2 - Parm constuctor - Part 2 d = " << Whole2.Part2.getD() << endl;
```

```
//Step 3 – Use it with the dot notation
```

```
Whole2.setX(51);
```

```
cout << "Whole 2 - set whole X = " << Whole2.getX() << endl;
```

```
Whole2.setPart1D( 52);
```

```
// Defined in private section so you have to use the functions.
```

```
cout << "Whole 2 - set Part 1 d = " << Whole2.getPart1D() << endl;
```

```
Whole2.Part2.setD(53);
```

```
// Defined in public section so you can use part with dot notation.
```

```
cout << "Whole 2 - set Part 2 d = " << Whole2.Part2.getD() << endl;
```

Week 7

October 2 2022

Week 7 Prog 2

I learned: how to get and set values in compositional classes

myPartClass
-D: double
+getD() double +setD(inD: double) void

myWholeClass
-x: int
+getPart1D() double +setPart1D(inD: double) void +getX() double +setX(inX: double) void
